

## IDENTITY AND ACCESS MANAGEMENT ADVISORY SERVICES

# Our Identity and Access Management (IAM) experts will guide you to a **more effective and efficient** IAM program

Improperly implemented IAM programs can lead to cost overrun, breaches, and tool implementation failures.

Many security incidents are the result of stolen or compromised credentials, poor access controls, and improper access configurations. It's critical to define processes and implement the right Identity and Access Management solutions to manage the lifecycle of accounts and monitor access.

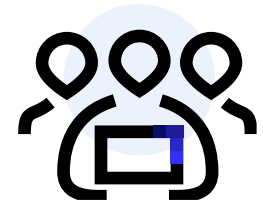

Identity is at the core of any good security program, defining which personnel or assets are able to access what resources, and when they are authorized to access them. It's no surprise, then, that the use of stolen credentials is one of the most commonly seen first steps in the compromise of an organization.

Our team of Identity and Access Management experts will evaluate your IAM program from all angles, provide recommendations for achieving the best end-state possible, and help you build out advanced programs to enhance your security. Services include:

- ✓ IAM Program Assessment
- ✓ IAM Strategy and Roadmap Development
- ✓ Assessments, workshops, and health checks for IGA, PAM and Access Management, Zero Trust, and Passwordless architecture

### Benefits:

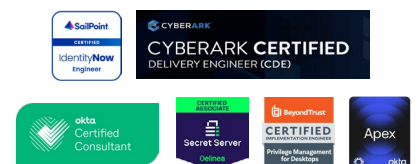

- ✓ Conduct your operations in a secure manner by ensuring a well-governed IAM program
- ✓ Improve your operational agility by reducing operational costs through automation while enhancing the end-user experience
- ✓ Optimize the return on your IAM program investment

## Put a Highly-Trained, **ELITE** Team on Your Side

More than 70% of our workforce consists of tenured cybersecurity engineers, architects and consultants.

## Hundreds of Industry and Product Certifications

**Our Identity and Access Management Advisory Services help your organization achieve the best possible end state for your IAM program.**

## Advisory and Assessment Services

Through a series of discovery sessions, we are able to identify and define the observations, recommendations, architecture design, roadmap items, and implementation strategy required to build and maintain a successful IAM program.

## Health Check Services

Our Health Check Services are purpose-built to assess the function and maturity of your IAM features and processes. Health Checks are available your IGA, PAM and Access Management tools, map capabilities to internal policies, help gain positive control over identities, and align use cases with available functionality.

## IAM Advisory Guidance

Regardless of the strategic or technical hurdle clients face, our advisory resources are able to provide solutions rooted in past experience. These solutions reduce wasted time and allow client resources to spend time on new tasks.

## Merger and Acquisition (M&A) Assessments

Our M&A assessments document current processes for the multiple entities, identify redundant processes, and deliver roadmaps and strategy for implementing new consolidated workflows. We take into consideration industry and technology best practices as well as the needs of each business entity in order to provide a plan that eases the difficulties associated with M&A activities.

## IAM Technology Proof of Concepts (POC)

POCs allow you to see tools in action and demonstrate specific use cases. Our POC services help you develop meaningful use cases that demonstrate the ability of IAM tools to implement your workflows and processes. Additionally we assist in consolidating feedback from POCs to help you make a more informed tool selection.

## Zero Trust Workshops

A Zero Trust security model is all-encompassing, but doesn't require an entire re-architecture. Our Zero Trust workshops are designed to facilitate your journey through iterative, manageable steps to understand your current maturity level, drive the adoption of critical ZT capabilities and optimize existing controls.

## Passwordless Workshops

The move towards passwordless access management has accelerated in recent years, and our experts are here to help your organization navigate the changes necessary to adopt this new model. Through our workshops you can understand your existing maturity level and enhance your transition to a Passwordless model, drive the adoption of critical capabilities, and optimize your existing controls to align with your goals for reducing risk.
