

Ensure the **Integrity and Security** of Your Physical and Virtual Networks

Your Network infrastructure is critical to your business, but managing it alone can be a daunting task.

Our Network Security services are designed to protect the integrity, confidentiality and accessibility of your organization's network and data. We can help ensure your network is protected against threats through the implementation, management and optimization of both hardware and software technologies.

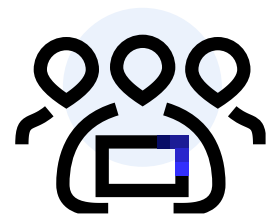

Finding the right team to secure your network, and therefore your entire business, is no easy feat.

Modern network security covers a massive range of different practices that all require their own expertise and knowledge to run effectively. Hiring, training, and maintaining an internal team to cover all these aspects can be difficult for even the most advanced and well-staffed organizations.

Our team, which has decades of operational security experience, can help you protect your network from the perimeter to the core. We can evaluate and address your organization's current network security needs and help you plan for the future.

Benefits:

- ✓ Leverage innovative network technologies to help proactively address evolving cyber threats
- ✓ Monitor networks and systems to detect and prevent malicious activity
- ✓ Keep shared data secure while ensuring reliable access and network performance
- ✓ Establish Incident Response and Disaster Recovery Standard Operating Procedure documentation according to industry best practices
- ✓ Create a protected network architecture through secure access protocols
- ✓ Mitigate cyber risk and protect your and your customers' data and information
- ✓ Ensure compliance with a wide range of regulatory and internal policy requirements
- ✓ Build and maintain your customer's trust and confidence

Put a Highly-Trained, **ELITE** Team on Your Side

More than 50% of our workforce consists of tenured cybersecurity engineers, architects and consultants.

Hundreds of Industry and Product Certifications

Our Network Security Services cover everything from assessments and planning to implementation of advanced security tools.

Assessments:

GuidePoint Security experts will partner with your team to fully understand the scope of your network, assess your controls and security maturity, and make best-practice recommendations for improvement.

- ✓ Zero Trust Network Access (ZTNA) Readiness Assessments
- ✓ SASE Assessments
- ✓ Network Access Control Assessments
- ✓ Firewall Assessments
 - Rule Analysis
 - Vendor Best Practice Review
 - Compliance Checks

Platform Specific Services:

Our experts are fully trained and certified across a broad range of Network Security tools to ensure the best possible implementations and configurations for your environment.

- ✓ Cloud & NGFW Architecture, Deployment and Optimization
- ✓ Network Access Control Implementation & Optimization
- ✓ Secure Access Service Edge (SASE) Architecture, Deployment and Optimization

Implementation and Staff Augmentation:

Designing and implementing your network security controls is no easy task, and hiring, training, and maintaining a full staff for all of your Network Security needs is expensive and time-consuming. Our experts are ready to step in and act as members of your own team.

- ✓ Next Generation Firewall (NGFW) as a Service
- ✓ Network Access Control as a Service
- ✓ SASE as a Service

About Us

GuidePoint Security provides trusted cybersecurity expertise, solutions and services to help organizations make better decisions that minimize risk. GuidePoint's unmatched expertise has enabled a third of Fortune 500 companies and more than half of the U.S. government cabinet level agencies to improve their security posture and reduce risk.
