GUIDEPOINT® SECURITY

OKTA WORKFORCE HEALTH CHECK

Regular health checks are vital to ensuring the security and integrity of your Okta Workforce platform.

Misconfigurations in your Okta deployment can lead to inefficiency and security issues.

Our team of Okta experts will evaluate your Okta platform and configuration to ensure it meets industry best practices and takes full advantage of the latest features and innovations included in your license.

Recently, Okta has dramatically increased the pace of innovation in their platform with new features that provide more options for managing your organization and increasing security. However, the added layers and flexibility could lead to misconfigurations and management overhead if not properly implemented.
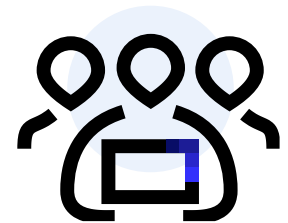

GuidePoint Security's Okta Workforce Health Check is a tailored version of our full Identity and Access Management Assessment, built specifically to address your Okta platform. The assessment provides you with a detailed snapshot of your Okta platform, security posture, and processes, and delivers a customized report of recommended optimizations to drive your business goals.

Put a Highly-Trained, ELITE Team on Your Side

More than 70% of our workforce consists of tenured cybersecurity engineers, architects and consultants.

Okta Health Check: The Why, When, and How

Okta continuously releases new updates and services to enhance your organizational security, ranging from feature upgrades to fundamental changes to authentication and authorization in the Okta Platform. Whether you've held off updating or have recently upgraded, a health check is a perfect opportunity to evaluate your Okta Platform.

Why you should get an Okta health check:

Okta's "Always On" SaaS platform provides customers with immediate access to new innovations and features, but keeping up with innovations and related industry practices can be a challenge. Being aware of how to fully utilize the licensing and features available is key to a successful Access Management Practice.

When you should get an Okta health check:

Health Checks are most valuable to existing Okta customers that have deployed more than 12 months and should be part of an annual review of the Access Management platform. The longer the environment has been deployed without a health check, the more valuable it will be to your organization.

How GuidePoint Security works with you to complete your health check:

In order for our experienced Okta professionals to access your Okta platform to determine the configurations and health of the systems, your team will need to grant our experts Read Only access to the Okta tenant via the admin user interface and APIs. To ensure we have a full understanding of your use cases and environment, we will interview your Identity team and establish the guidelines for our work in your platform.

Dependent on resource availability, most health checks are completed within one week. There can be a lead time for resource availability.

About Us

GuidePoint Security provides trusted cybersecurity expertise, solutions and services to help organizations make better decisions that minimize risk. GuidePoint's unmatched expertise has enabled a third of Fortune 500 companies and more than half of the U.S. government cabinet level agencies to improve their security posture and reduce risk.
